NTP Radioisotopes SOC Ltd

LEADERS IN NUCLEAR MEDICINE

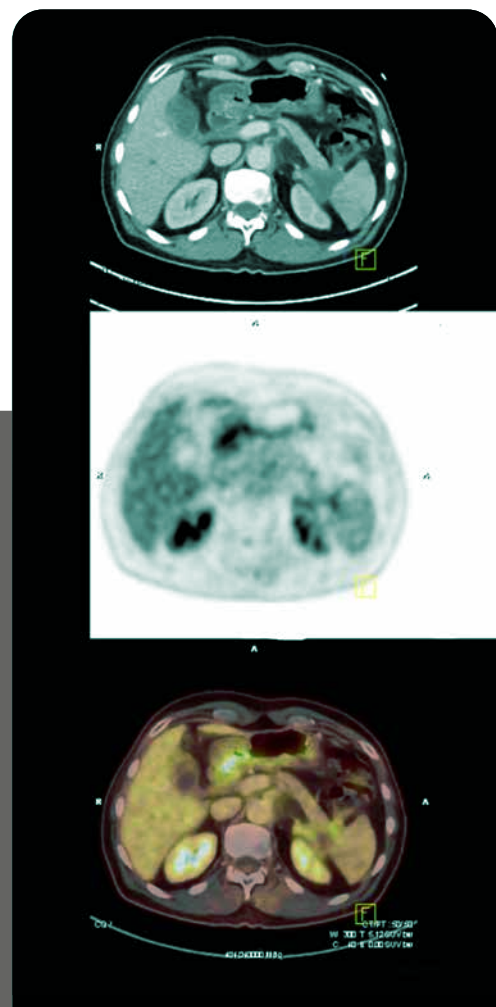

Nuclear medicine is a specialised branch of medicine that uses tiny amounts of radioactive material together with pharmaceuticals to diagnose and treat diseases including cancer, cardiovascular disease, neurological disorders and endocrine diseases – particularly thyroid conditions.

Unlike X-rays, nuclear medicine enables practitioners to observe organs and systems as they function, right down to a molecular level.

The same technology also allows nuclear medicine practitioners to treat certain conditions using therapeutic medical radioisotopes.

The detection of diseases using nuclear medicine techniques, such as molecular imaging, has great advantages for patients! Global demand for nuclear medicine and medical radioisotopes has shown significant growth over the last decade, driven by increases in incidence of cancers and cardiovascular disease and the growing number of new applications for medical radioisotopes – including the study of neurological and psychiatric diseases.

*Nuclear Medicine – for
painless, safe, early
and accurate diagnosis
and treatment*

BENEFITS OF USING THE NTP RADIOPHARMACY

- Reduce inventory on your shelves
- Order what you want when you need it
- Stockless inventory using just-in-time delivery
- Cost-effective – reducing overall costs
- Reduce radiation exposure to employees
- Improve patient care and productivity = spending more time with the patient and less time preparing doses

High specific activity. Best product quality and yield.

YOUR UNIT DOSE, STEP BY STEP

- Place your orders with one of our sales representatives
- Each prescription is reviewed by a licensed nuclear pharmacist
- Pharmaceutical preparation begins with daily generator elution and compounding
- Patient-specific prescriptions are dispensed, ready for administration
- Unit doses are delivered to the practice

NTP HEALTHCARE PRODUCTS

- Mo-99/Tc-99m NovaTecP Generators
- Various cold kits
- I-131 capsules & solutions
- Probe rental
- FDG-18 (Gluscan)
- F-18 PSMA 1007
- Tc-99 labeled products
- Lu-177 labeled products
- Ac-225 labeled products
- Tb-161 labeled products
- Life Sciences products
- QSA products
